

Definitions

- 1.) Given a set P , a partial order on P is a relation \leq on P that satisfies the following conditions:
 1. For all $p \in P$, $p \leq p$. (Reflexivity)
 2. For all $p, q \in P$, $p \leq q \wedge q \leq p \implies p = q$. (Antisymmetry)
 3. For all $p, q, r \in P$, $p \leq q \wedge q \leq r \implies p \leq r$. (Transitivity)
- 2.) Given a relation R on a set P , R is transitive if for all $p, q, r \in P$, $p \sim q \wedge q \sim r \implies p \sim r$.
- 3.) The union of a collection of sets $\{S_\alpha\}_{\alpha \in A}$ is defined as the set $S = \{\}$

Proofs

- a.) awd
